MAINTENANCE

Only fully trained operators should be responsible for the maintenance of batteries.

Use only approved distilled or demineralized water.

Check if the charger is functioning correctly.

The reading of Sp. Gravity, Voltage, Temperature and the water consumption during topping would serve as a useful monitor of the state of battery.

Important instructions:

Fill battery with sulphuric acid with specific gravity of 1.260 at a reference temperature of 30°C.

Charge battery at 4 amperes until the on-charge voltage across the terminals and specific gravity of acid remains constant over 3 consecutive 15 minute intervals.
